

Prevent the introduction of invasive plants from contaminated sand and gravel by inspecting quarries before you buy material

- 1) Aggregate (sand/gravel) is mined from quarries.
- 2) Inspect mining area, crushing and sorting zones and stock piles.
- 3) If the quarry has weeds that you don't want, either don't buy it, or work with the quarry operator to develop a weed management plan.
- 4) If the quarry has clean material, buy it! Repeat inspections regularly.
