

KARI OSEGUEDA
CDFA IPC MAPPING

WHAT I DO

- Receive county data and collate database
- Assist the counties with building their mapping programs
- Work with CDFA and CallPC staff to utilizing current weed data for regional planning

CURRENT PROGRESS

- Great data is being collected
- Counties without mapping programs are getting started mapping

GREAT DATA

- As much detail as you have- lots of points, population size, revisits and seasonal updates!
- Negative data is great too! Couldn't find a population from years past? Note that it appears eradicated.
- Get to know potential early detection targets, but also don't hesitate to map the weeds you're already tracking.

DATA SUBMISSION

- Calflora groups are great
 - Shapefiles are great
- If your program would like assistance, reach out!
