Calflora

information on wild California plants

What is Calflora?

Calflora is a 501(c)3 non-profit plant database. We provide information on wild CA plants for conservation, education, and appreciation.

1994: PhD botanist Ann Dennis shared a text file of CA plants.

1997: Local botanist Tony Morosco joined Ann's efforts to document local plants.

2000: They created Calflora 501(c)3 not-for-profit.

the roots of Calflora

Calflora

information on wild California plants

The Calflora database contains

- > 10,000 native and introduced plant species

Calflora

information on wild California plants

The Calflora database contains

- > 10,000 native and introduced wild plant species
 - > 3.5 million plant location observations (points, lines, and polygons) from dozens of data sources

Calflora

information on wild California plants

The Calflora database contains

- > 10,000 native and introduced wild plant species
 - > 3.5 million plant location observations (points, lines, and polygons)
 - > 30,000 relationships between old and new plant names

Calflora

information on wild California plants

The Calflora database contains

- > 10,000 native and introduced wild plant species
 - > 3.5 million plant location observations (points, lines, and polygons)
 - > 30,000 relationships between old and new plant names
 - > 300,000 plant photos

Calflora

information on wild California plants

The Calflora database contains

- > 10,000 native and introduced wild plant species
 - > 3.5 million plant location observations (points, lines, and polygons)
 - > 30,000 relationships between old and new plant names
 - > 300,000 plant photos
- > 80,000 unique Calflora e-visitors each month (~2,600/day)
- > 4,000 active data contributors (you?)

Calflora

information on wild California plants

The Calflora database contains all 10,000+ native and introduced species: all **wild** plant species in the state.

We receive many data feeds from other data sources, including CCH and (some filtered) iNaturalist data.

Questions & Discussion

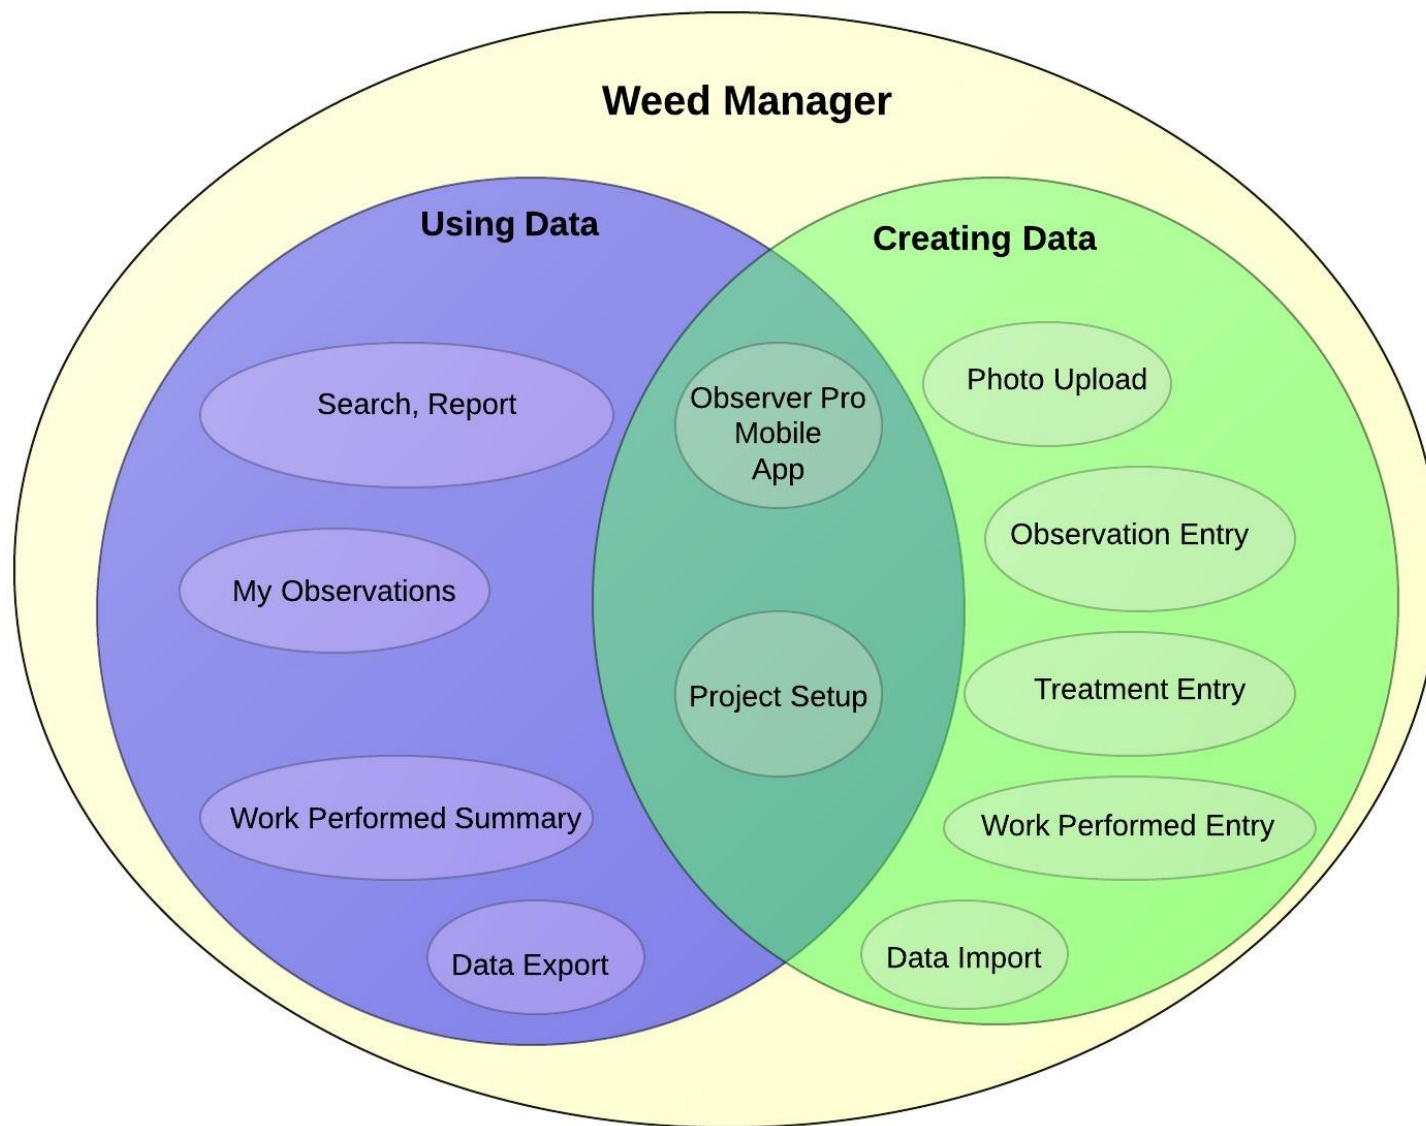

FREE TRIAL

- Through December 31st , 2023
- One custom form
- See all your groups observations in one place
- Access to all the tools we will review today
- Contact Calflora to get set up!

Weed Manager (WM) is a system which enables organizations engaged in land management to track weed infestations and treatments over time.

Weed Manager

- Collect data

 - spatial & tabular
 - field or office

- Personalized forms, data dictionaries

- Searchable/viewable online

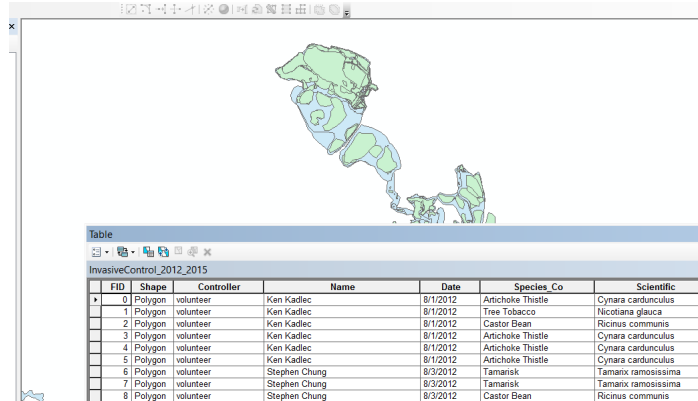

- Run customized reports

- Export to many formats

Questions & Discussion

Weed Manager tools

- **Weed Manager Groups**
- Coordinating Groups
- Project setup
- Shape Editor
- Work session entry
- Reports
- Survey entry
- Hour and herbicide distributor

Weed Manager: **Groups**

A group is a set of people using Calflora with interests in common.

- data collection
- data management

Share

- observations (including unpublished)
- searches
- plant lists

* group may have one or more “data czar(s)” who can edit / publish / delete any observations in that group.

Roles

Owner – add/remove members, assign roles

Czar – edit any observation in group

Project Czar – can edit existing projects and all records in the project they are assigned to

Team Leader – can edit existing projects, work session entry

Regular Member – edit their own, view all other data

Nominal Member – can only add data to group

Weed Manager: **Project Setup**

A project is a way of organizing data collection and treatment records.

- For each record in WM
- Work session entry is organized by project
- Each project has defined field set for POE and Observer Pro
- Observer Pro
 - Historical records
 - Form – field set
 - Plant list
 - Center point

Weed Manager tools

- Weed Manager Groups
- Coordinating Groups
- Project setup
- **Shape Editor**
- Work session entry
- Reports
- Survey entry
- Hour and herbicide distributor

Weed Manager: **Shapes**

you have your own portfolio of lines and polygons.

- 1) observation record with a line or polygon
- 2) make a search polygon from Observation Hotline or What Grows Here, and save it by name

Shape Editor application – search, view, create and edit

- upload a polygon shapefile (multi-part)
- make available elsewhere for search

* You can also share your polygons with a group.

(Shape Editor demo)

 **YouTube** VIDEO: How to draw a polygon in Calflora map applications

- Hour and herbicide distributor

Weed Manager: **Survey Entry**

survey = a search for certain plants in a discrete area at a certain time

need to specify:

- Area
- Date
- Plant list

For each plant in the plant list, you can indicate whether or not you found it. If you did find it, you may indicate how abundant it was (1+, 1-10, 11-100, etc.).

You may also indicate plant count zero for “not found,”
→ **absence data** for that surveyed area.

Alert: EDN recent records

Here are **3 records** that have been added or modified in the past week.

[Ophioglossum californicum](#), California adder's tongue

Orange County

Ron Vanderhoff, 2018-03-19 (modified on 2018-03-31)

Area re-surveyed following 3-15-18 detection. 2,000 plus emergent stage plants estimated, over an area of approx. 1acre. All plants growing in flat, moist clay soil on east or northeast light shade from Eriogonum fasciculatum. Usually on mostly open soil, occasionally in short grass. Abundant bryophytes, soil crust well developed. With abundant plantago erecta. All vegetative.

[Oxalis californica](#), Californica wood sorrel

Orange County

Brett Dean, 2018-03-30

[Salicornia pacifica](#), Pickleweed

Alameda County

Michael Perlmutter, 2018-04-03 (modified on 2018-04-04)
